Architectural

A

Architectural

ARCHITECTURAL applies to all the lighting installations for homes, terraces and gardens.

Some products are unique, some are designed as a series. The points to consider are multiple. Each lamp has two lives, one during the day, the other at night.

The first impact is decorative, whether we like it. The second is what we expect and are looking for in terms of light effect.

It is the combination of these two elements that gives the best adapted product to each of us.

Solar

Solar

We developed different products for different applications around solar energy, portable lights or architectural, but always with the same ease of use and implementation. Today, as a result of continuous research, the high efficiency solar panels in combination with powerful LED modules are giving a really satisfactory level of light. Cleverly making the most out of the available solar energy is realised by intelligent user interfaces such as 3-step dimmer, timers and PIR-sensors, resulting in more autonomy and desired light levels.

Security & Work Light

S & W

Security & Work Light

SECURITY consists of a compact range focussing on safety applications. Powerful floodlights with adjustable single or multiple spot heads, enable large areas to be lit. The PIR-movement sensor equipped with multiple parameter settings enables the installation of a perfect detection system.

WORK LIGHT full range covering all lighting needs for any work shop or construction site. From small to large, from domestic to professional. We focus on easy manipulation and light efficiency and being compact when not in use.

CORN

wall

Ingenious security light. The articulation possibilities over the central rotating part and the individual adjustable spot heads gives an incredible range of settings. The powerful LED source makes your outdoor areas as bright as day. The combination of the stylish cooling ribs on the back and the LED source results in a very low heat emission. This allows the floodlight to be installed under porches.

The PIR sensor is adjustable in time and distance covering a wide detection area.

IP54
LED 20W
Die Cast Aluminum
2100 Lumen

PERI

wall

 This new version of security floodlight combines a very powerful LED source with a double and adjustable motion sensor. The frontal sensor has a detection range of up to 20 metres. The second sensor covering the area under the floodlight detects movement close to the wall.

 The electrical jack connection allows a simple and easy installation, with no tools needed. The PERI series comes in a single and double spot head version and is suitable for wall and ceiling mounting thanks to the rotating base.

Functional

Functional

Under FUNCTIONAL ranges, we propose a number of essential lighting fixtures with a straight forward design. Ideal complements for functional applications like corridors, staircases, hall ways, entrance paths and facades. Most of the ranges come with an impact-proof polycarbonate opal diffuser resulting in a homogenous and strong light output without shadows. The recessed ranges for wall & ground are covering all standard applications. This with multiple light source possibilities and small, medium and large sizes.

INTRODUCING OUR COMPANY

40 years of experience

The beginnings of a lighting company

Originally as a national aluminium die-cast factory, we acquired our first experience in outdoor lighting by producing bulkhead lights & classical garden lanterns.

Our quality standards met international standards and the first export shipment was made in 1996.

The new factory in the Far-East Industry park in Yuyao was operational in 2001, concentrating on modern garden & professional lighting resulting from a booming international DIY & ODM demand.

From 2009 a close collaboration with the Design(Pool) had two objectives. To create a stronger offer for the ODM market and to launch a base for our future brand LUTEC.

LUTEC was launched in 2010, focusing on architectural LED lights & introducing Solar Energy studies.

This has resulted in the opening of a second production facility in 2012, fully devoted to future developments.

Nowadays

Lighting is both essential and magic.

The challenge of lighting is to create products which are a balance between the shape impact and attractiveness, and real functional values of use. The LED revolution has completely changed the game, giving us a lot of new opportunities. Added to this we must follow the latest technical innovations but also anticipate and provoke them, especially with solar energy and lighting control processes.

To serve our objectives, we are reinforcing our international network and organisation: central warehouses in Germany and China, establishing partners in new countries, the building of our corporate identity and also developing many different brand supports.

Future is already here

Support the users

In our daily life we are surrounded by interactive and connected products. For many reasons it is evident for the lighting field to embrace this, among which is the ability to organise the light at will: temperature, color, control of the sensors, programming, energy saving and control, interactivity between several light points, security with camera, sound...

Our new APP, running on a smart phone, can help program and control all the information received through our products.

WELCOME TO THE LUTEC CENTER

Connected by lighting

The LUTEC centre is in our HQ in Yuyao. Located on the production site, it is an international meeting place where new concepts are elaborated, innovation & strategies are shared, discussed and studied.

We provide an expert platform in design, sales and services. We have the will to show and experiment different approaches creating choices for the short or medium terms. Staying close to our customers, which by extension also means the final consumers, allows the right design solutions to be found. Our team is trained for being reactive. The key to realize a win-win product is to always explore the possibilities, select and adapt, finding the adapted position.

In our view innovation is always closely linked to a right level of realization.

LUTEC

It is true, LUTEC is a young brand but it is built on a strong manufacturing experience. Manufacturing involves imagination and efficiency.

Why we decided to establish a brand?

The brand gives us a needed visibility. The brand allows us to anticipate the market, to make our own choices related to trends and to make developments such as we perceive them through our partners in different countries.

Connected by lighting underlines our intention to develop products in accordance with the final consumers, through all our network and distribution channels.

Now becoming a major player in lighting field, our main objective is to consolidate our offer through creativity, the design which involves a real level of quality and services.

DESIGN & ENGINEERING

Design, engineering & manufacturing, all interactive.

One of the main decision we have taken in the LUTEC organisation is to break the walls between the different integrated services concerned by our product strategy. We have installed a culture of flowing communication between the services where everybody has a positive role to play in all projects. It works because we consider that we are all concerned in the success of a product.

We know that whatever the project it is complex and a number of obstacles have to be got through. To be as perfect as possible means working together: knowledge has to be shared at all levels. Creativity, marketing, engineering, production, communication, sales are all one and the same, totally linked.

WAREHOUSING & TRANSPORT

Global logistic footprint assuring availability & proximity.

Today, we stock all A-items (161 sku's with high rotation) in the China Central Warehouse. (CCW). In this way we can guarantee an immediate shipment from the Ningbo harbor all over the world. The B & C items are made to order with a clever spareparts replenish system behind.

CCW
China Central Warehouse
Yuyao - China

ECW
European Central Warehouse
Cologne - Germany

LUTEC

DB SCHENKER

Since 2014, the European Central Warehouse is fully operational. This warehouse is centrally situated in Europe and operated by our logistic partner DB Schenker. With a standard lead time of 1 week for all shipments to whatever place in Europe, the LUTEC articles are always within reach. We can offer different transport options: direct shipment, cross docking or pick-up, in close cooperation with our local Sales Cy & Distributors. Actually the ECW-portfolio contains the 150 best-running sku's.

With the LUTEC App, our Partners can consult in real time the stock situation in the CCW & ECW, plus the incoming shipments. This will lead to transparent and complete info towards our customers.

LUTEC Quality

As a global supplier, our products are fully compliant with all technical & quality requirements of the different regions in the world.

All LUTEC LED articles benefit from a 5-years functional warranty. For the SOLAR range we apply a standard 2 years functional warranty.)

Integrated LED Light-engines

We apply in our designs the most appropriate LED light engine. Thanks to the in-house engineering and manufacturing in combination with a good relation with A-brand component suppliers, we're constantly improving the performance of the total LED-module. This results in a higher lumen/watt ratio but also in an improvement of the lumen/dollar ratio.

Low Energy Cost : -80% Energy consumption vs traditional lightsources

Long Lifetime : up to 20.000 hours

LUTEC LED-light engines featuring the most appropriate characteristics in order to give the best result for all your outdoor applications.

The LED driver is the heart of the LED module and is the main influencer of the life-time. At LUTEC we develop these drivers according the engineering & design requirements. The manufacturing of the SMD's of these LUTEC-drivers is done on the in-house approved SMT assembly lines. In some cases we apply also drivers of A-brand suppliers. All drivers are compliant to all standard requirements and regulations. UL – GS- EMC-FCC-ERP

The LUTEC products are manufactured at the 100% controlled own production facilities and fully tested at the in-house approved lab

LUTEC works only with famous A-brand LED suppliers and strict requirements.

- Lumen Maintenance in time : 100% LM-80 test report
- Color deviation: 100% under 5-step MacAdam ellipse
- ERP compliant

The Light Color or Color Temperature in Kelvin (K) gives a clear indication about "whiteness" of the LED light.

Standard we apply the **4000K Daylight**. For most fixtures with diffuse light and vintage look a **3000K Warm White light** is installed. The more functional work & security projectors have an integrated LED source with a **5000K Cool White light**.

Color Temperature in Kelvin Scale

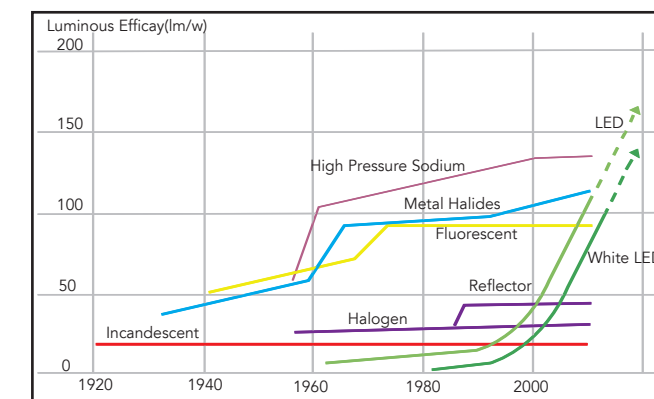

The **Color Rendering Index (CRI)** gives on a 0-100 scale an indication the color accuracy.

Determining the ability of the light source to reveal the colors of the object faithfully in comparison with a natural light source. In all LUTEC fixtures we apply a CRI of minimum 80%. For Outdoor applications this is a more than satisfying level.

The **Luminous Flux** of an Outdoor fixture indicated in an nbr of **Lumen**. (lm) is the total amount of light which comes out of the fixture in all directions. It gives a good measure of the **brightness** you can expect. This Lumen indication replaces on a clearer manner the previously used wattage.

Brightness	220+	400+	700+	900+	1300+
Standard	25 W	40 W	60 W	75 W	100 W
Halogen	18 W	28 W	42 W	53 W	70 W
CFL	6 W	9 W	12 W	15 W	20 W
LED	4 W	6 W	10 W	13 W	18 W

The Luminous Efficacy in Lumens/Watt gives a good measure of the optimal conversion of the electrical power into useful light. This is an important parameter with direct impact on the electric energy cost for your installation. Thanks to the continuous developments the LED solution is already today one of the most efficient light technologies. The Luminous Efficacy is one of the main parameters for the determination of the Energy Efficiency class.

According the EU regulation no 874/2012, about energy labelling of electrical lamps and luminaires, it's required that the consumers are informed about the Energy Efficiency class.
For all LUTEC articles this information is available on our website www.lutec.net.

All the LUTEC LED- fixtures featuring an **Energy Efficiency class A+ or better.**

Materials & finishes

For all LUTEC luminaires we apply the most appropriate high quality materials & finishes, all with an excellent weather proofness & mechanical strength to ensure a long lifetime.

Heavy duty die-cast Aluminum type ADC 12. Thickness of 2mm and a very good compactness, no air holes inside. In house fully automatic powder-coating & water painting-installation giving a perfect protection against corrosion.

LUTEC benefits from an in-house tooling workshop both for aluminum & synthetic components. This great asset & experience assures a high quality production.

Different types of **premium Stainless Steel**.

For the ground recessed spots : 304 & 316 standards. For the wall & bollard versions : 201 & 202.

Electrophoretic painting resulting in an extra protection layer.

Different kind of **durable synthetics**, depending on the application and form factors. For the fixtures: in most cases ABS, this is a strong, light-weighted material and can be used under low and high outdoor temperatures. For the diffusers: the impact proof and very resistant PC (polycarbonate) is used in opal or transparent version. Also clear glass, tempered glass and opal or clear PMMA (plexi-glass) are common in our designs.

IP rating Table

Protection against solids		Protection against liquids	
0	Not Protected	0	Not Protected
1	Protected against Solid Objects greater than 50mm	1	Protected against Dripping Water
2	Protected against Solid Objects greater than 12mm	2	Protected against Dripping Water when tilted to 15°
3	Protected against Solid Objects greater than 2.5mm	3	Protected against Spraying Water
4	Protected against Solid Objects greater than 1mm	4	Protected against Splashing Water
5	Dust Protected	5	Protected against Water Jets
6	Dust Tight	6	Protected against Heavy Seas
		7	Protected against the effects of Immersion
		8	Protected against Submersion

The LUTEC Outdoor fixture comply to the International standards concerning **Ingress Protection**. All articles have a minimum IP44 rate. For some specific applications (Ex. in ground recessed spots) the protection rate goes up to IP67.

Mounting, installation & maintenance

LUTEC pays a lot of attention to a consumer friendly mounting and foresee a variety of application possibilities, enhanced by specific & clever user-interfaces. Every LUTEC Outdoor fixture has a clear **instruction manual**. The mounting and the installation is easy and fast. No specific tools are needed.

Service network available on global level through LUTEC Partners.

The **maintenance** of a LUTEC LED Outdoor fixture is fairly convenient. No bulb change needed thanks to integrated LED technology. In aggressive surroundings (close to the sea, industrial areas), clean the fixture regularly with a soft dry cloth.

For a convenient multi-installation of the outdoor lights, a loop in- loop out for the electrical cable connection is foreseen in most of the articles.

LUTEC

CONNECTED BY LIGHTING

The LUTEC corporate identity has been reinforced with the constant implementation of a new visual identity and brand strategy.

New trade support tools are developed and used by our customers, creating an added value and differentiation versus our competitors.

LUTEC packaging

The new LUTEC packaging is now fully implemented over the complete portfolio. The look of the packaging is fresh and vivid giving the consumer immediately the right information and inspiration.

The product is the leader and gets the full attention with a clear picture. The renewed LUTEC logo covers all angles in the top corner, resulting in a uniform and clear brand recognition. The most relevant decision making characteristics are shown in big size on the front, top and second side. In this way the packaging is suitable to any position in the shelves. On the back side the complete technical information is shown in a logical and clear way.

LUTEC rich content

We have created a large database with all kind of "rich content": Atmosphere pictures, Video's, Tutorials,... This can be used for all kind of commercial & advertorial purposes. Also on-line pages will get in this way the complete & dynamic content to inform & inspire the consumers about the LUTEC propositions.

Secury Light Video

Mini Butterfly Video

Sunconnec Video

LUTEC in store support

Based on consumer insights and requests from our customers, we're proposing a large number of in store support tools. Always starting from the same idea : the product is king, the consumer should be guided in a clear way facilitating his selection in a convenient way.

Carton Promo-displays, easy to install, fully pre-packed with an informative top card.

45x45x160 cm

Action displays for promo-zones, including an attractive expo-board indicating the major characteristics plus a mounted and lighted product sample.

1/2 pallet

Inspiring shelf presentations. Showing in a pleasant and attractive way the product characteristics and the diverse application possibilities

Stand alone island displays . Ideal solution for second placement or seasonal activity, enhancing the right atmosphere and inspiration for all shoppers.
